

Human Connection Within Physical and Digital Space

You will go around the room with your group. Do not switch to the next paper until Mr. Boruff instructs you to do so.

While at each station, do the following:

- As a group, discuss:
 - What real-life situations, topics, or issues reflect (are connected to) this idea?
 - How do those real-life situations, topics, or issues relate to this idea?
- Discuss the ideas that are already on the paper.
- On the paper, add 1-3 topics to the paper. The goal is to make a collage of topics.
 - Do not editorialize or write complete sentences. Simply add a phrase that represents the topic.
 - Example: “Social Media Advertising” to The Role of Technology
 - Please act with tact and sensitivity. Do not write down intentionally inflammatory things.
- If you believe that one of the topics written down by a different group does not effectively reflect the idea OR the stimulus materials, add a small question mark (?) after it.

TOPICS

- Mobility, Migration, Movement, and Expansion
- Technology and Digital Communication
- Architecture, Design, and Layout
- Access, Equity, and Inclusion
- Power, Culture, and Community Spaces
- Regulation and Responsibility
- Environmental Consequences of Infrastructure

For Each of the Three Topics
